

Professional Practice Structure

Acceptable practice structures:

- Solo
- Partnership, Professional Association or Limited Liability Company composed solely of licensed health care professionals
- Associational Relationship - independent contractor or employee where the employer can not have a license more limited than that of the employee (i.e. chiropractor can not employ a physician, podiatrist can not employ chiropractor)
- Shareholder or employee of general business corporation - must have designated medical director licensed in NJ regularly on premises

Anti Kick Back Regulations

Regulations are in place for physicians who sell health care related products and services from the office, as well as certain referrals. If a situation causes you to wonder about finances or conflict of interest, it's best to consult with your attorney first.
